Hattie Starr, who is well known as a composer, was the mezzo soprano, and the two comedians were Al Leech and James F. Macdonald, who afterwards made a great hit in "The Telephone Girl" when it was produced in New York a number of years ago. The opera contains thirty-two numbers of music, comprising an overture, solos for the different voices, choruses, three duets, an amusing trio, an unaccompanied quartet in 5-4 time, a laughing duet, one dramatic finale to Act II, and the sextet which will be sung under Mr. Ingalls' direction.

KAMEHAMEHA GIRL URGES THAT HAND AND MIND BE TRAINED

Graduation Essay Is Plea to Hawaiians For Industry.

Note.—The following article is an essay read by Miss Dora Peller, of the 1911 class, Kamehameha Girls' School, at the Commencement exercises held on June 5.

THE EDUCATION OF HAND AND MIND

What is the purpose of education? Before a man can be of any use to a community, before he can make a livelihood for himself, he must have some experience, he must have some ideal, something toward which he is working. We may say, then, confidently, that the purpose of education is to fit a man for his environment.

There has been considerable change during the centuries in the ideas of education and in the values of education. We can clearly see that. Long ago, many people thought that it was not necessary to educate the minds of the masses in order to better their country. Yet there were some people who from the earliest time have sought methods of education that would better men. In modern times, there have been Froebel, the father of the Kindergarten; Pestalozzi, the educational reformer; Rousseau, the great French writer; Mary Lyon and Horace Mann, both founders of schools in pioneer days. Then there have been Thomas Arnold of Rugby, Alice Freeman Palmer of Wellesley, Dr. John Dewey and Dr. Stanley Hall, who said he could do sixty things with his hands and who believed in the manual theory. Each of the above had a system he or she believed in and worked hard to advance educational interests.

Development of Late Years.
Up to about fifty years ago, the value of hand and mind training combined had not been realized. The tradition of the previous centuries prevailed, and all of the hand training was acquired in the shops of workmen and in guilds where the apprentices and even some of the master-workmen did not see the scientific aspect of things. The training of the mind was for the most part such as had been carried on in monastery schools, where there was no scientific training and where the monks imparted only as much as they thought wise to the ignorant. The two forms of education were kept wholly separate for centuries. But now it is believed skilled hand work should supplement mind training. Manual schools for practical and scientific training and trade schools have sprung up all over the world. Governments have introduced manual training into public schools and science forms an important part of the curriculum.

Just as the mass of people long ago were ignorant and sought to destroy the theories of great reformers, so do the ignorant today.

Applies to Hawaii.
In Anglo-Saxon countries, the necessity for education of hand and mind is pretty generally realized. Do we Hawaiians realize the full value of this new education? Does the ability to read and write constitute education? Are we satisfied with that alone?

Education is to fit the unfit, to prepare the unready and to give the unthinking an idea of the general demand for trained people who can and will do things with their hands. The great mass of mankind has only common ability and is fitted to do only common work; the skilled way in which mind and body work together and the unskilled way in which the body works is directed by the intelligence of some other mind. Duty to Hawaiians.

man directing, do the work. One of the most serious defects from which we Hawaiians suffer is the lack of perseverance. That is why so many people say it is of no avail to educate Hawaiians. But we of the present generation must prove to those who harbor this idea that it is of some use to educate Hawaiians and we must even if it seems hard, do this if we care to stand in places where we shall command the respect which we have grown to deserve. To do this, we must educate our hands, we must educate our minds, we must educate our souls.

When a worker knows why one method produces good results and another does not, when he knows why he does a piece of work a certain way, then he has begun his education. To carry it further he must gain skill by practice; discipline by doing disagreeable, monotonous things for long periods, to perfect himself, to test himself.

Advance Is Needed.
Shall we be satisfied to look on passively while other people advance? Are we satisfied to go on living with as few of the comforts and necessities of life as our ancestors had or are we willing to be painstaking, enduring and energetic and try in every way to qualify ourselves for the work that lies ahead to be done?

Persistence, endurance, energy, economy, thrift—are the qualities that mark successful races. It would seem then, that we Hawaiians are sadly in need of them. We must be able to lift ourselves up so that we can stand among our competitors and work as well as they in order to succeed.

Let us be sure that we know what success means. The position and success of a man or woman are not always indicated by clothes. Fashionable clothes do not always signify success, but skill in some craft, ability to work, to hold one's position, to be of value in one's trade, to keep one's word, surely indicates a degree of success. If we girls are to succeed, must we not put forth all our energy, cast aside our dislike for hard work and feel that more is expected from us than from our grandmothers? Must we not learn to meet our obligations, to pay our debts, to keep our promises?

As to Hawaiian Girls.
Are we Hawaiian girls now able to intelligently choose good leaders and advisers? Are our parents looking forward to having their girls trained to do some useful, necessary work well or do they prefer some easy situation for us where we shall work as little as may be gain nothing in training or development, add nothing of skill or power to our race? It is time for us to see that we must arm ourselves with patience, with endurance and be ready for emergencies and that we must not turn back, having put our hands to the plow.

It is necessary that our ideas of hand work and domestic work be such as will direct us to look for preparation for these and not make poor teachers, clerks, stenographers, when we might be good cooks, laundresses, seamstresses, nurses and housekeepers.
Let us cultivate the talent we have and seek to develop it. It is the talent that will make us useful as handworkers. Let us turn it to account honestly and vigorously. Let us fulfill the wish of our founder, "that we be good and industrious."
